Acto® Baby Spray

Protective spray for diaper area

- Protects your baby's skin
- Prevents the formation of diaper rash and irritation.
- Easy to use • Tested and approved by the German Dermatest Institute

ACTO® Baby Spray is used to cleanse the diaper area of your baby and protects against diaper rashes. The non – irritant and safe formulation is ideal for sensitive skin. It cleans and moisturizes the baby's sensitive skin. The ideal formulation of this solution prevents the formation of diaper rash and irritation. Avoids burning sensation.

Reduces the skin tension and removes the stiffness. **ACTO® Baby Spray** usage is practical and safe.

How to use:

Spray directly on the diaper area and wipe with cotton, cloth and paper towel. You can also wipe the correspondent area with cotton, cloth or paper towels which are sprayed with **ACTO® Baby Spray**. Optionally, the area can be wiped by a cloth or cotton pad that was sprayed with **ACTO® Baby Spray**. Spray as needed.

Unit	Article No.
50 ml	08.1096.50

Acto® Baby Gel

Protective gel for diaper area

- Protects your baby's sensitive skin against external influences
- Nourishes the skin and moisturizes
- Reduces skin tension and removes the dryness
- Prevents rash and irritation
- Easy to use • Alcohol and paraben free
- Tested and approved by the German Dermatest Institute

ACTO® Baby Gel is used to moisten the diaper area of your baby when you change the diaper. It is

suitable for even the most sensitive skins with its non-irritating and safe formulation. It cleans and moisturizes the skin which helps to reduce the skin tension, preventing the formation of diaper rash by keeping the area clean and dry.

How to use:

Change the diaper and apply a sufficient amount of **ACTO® Baby Gel** by each diaper change. Repeat if needed.

Take care of the wound!

Step 2

You can go through the healing process quickly and comfortably by choosing products with proven cleaning and antimicrobial effects for acute, chronic and infected wounds.

Actolind® w Solution / Gel

Cleansing, irrigation, moisturising, protection and care products for acute, chronic and infected wounds as well as 1st and 2nd degree burns.

- **Actolind® w Solution & Gel** accelerate the healing of wounds and burns
- **Actolind® w Solution** should be used for wound surface cleansing and irrigation before any treatment
- Bandages, dressings, pads, etc. such as **Actolind® Sterile Gauze Compress**, soaked in **Actolind® w Solution** can be used to clean wounds
- Removes contaminants, scabs, necrotic tissues and biofilm layers from wounds effectively by decreasing the surface tension
- Convenient and painless dressing changes. Softens encrusted dressing materials that are dried and adhered to the wound
- **Actolind® w Solution** can be applied in combination with **Actolind® w Gel** or **Actolind® Gel Plus**
- **Actolind® w Solution** cleanses wound surface gently while **Actolind® w Gel** protects and moisturises the wound surface
- **Actolind® w Gel** forms a protective film layer between the wound surface and the dressing and prevents the adhesion of pathogenic microorganisms on the wound surface mechanically
- Provides continuous moisturisation and infection protection
- Minimises the growth of microorganisms at the interface between the wound and the dressing
- **Actolind® w Solution** facilitates removal of biofilms

- while **Actolind® w Gel** prevents the formation of biofilms
- Highly effective against multi-resistant organisms (**MRSA, VRE**) and mycotic pathogens (*C. albicans*)
- Keeps the wound surface clean and moist
- High tissue compatibility. Neither inhibits granulation nor epithelialization
- Mucous membrane compatible. Neither irritating nor painful

Indications:

- Infected or uninfected acute wounds
- Infected or uninfected chronic wounds
- Infected or uninfected thermal or chemical wounds (e.g. 1st and 2nd degree burns, chemical burns, etc.)
- Wounds caused by electrical current
- Radiation wounds
- Entry regions of urological catheters
- Maintenance of peristomal skin, fistulas and abscesses
- To create a barrier between the wound and the dressing, to prevent drying out and sticking.

Actolind® Solution Plus/Gel Plus

Cleansing, irrigation, moisturising, protection and care products with optimized wetting effect for acute, chronic and infected wounds as well as 1st and 2nd degree burns.

- **Actolind® Solution Plus & Gel Plus** accelerate the healing of wounds and burns
- **Actolind® Solution Plus** should be used for wound surface cleansing and irrigation before any treatment
- Bandages, dressings, pads, etc. such as **Actolind® Sterile Gauze Compress**, soaked in **Actolind® Solution Plus** can be used to clean wounds
- Thanks to its enhanced wetting and surface tension decreasing properties, **Actolind® Solution Plus** removes contaminants, scabs, necrotic tissues and biofilm layers from wounds effectively by decreasing the surface tension more effectively compared to similar products.
- Convenient and painless dressing changes. Softens encrusted dressing materials that are dried and adhered to the wound
- **Actolind® Solution Plus** can be applied in combination with **Actolind® Gel Plus**
- **Actolind® Solution Plus** cleanses wound surface gently while **Actolind® Gel Plus** protects and moisturises the wound surface
- **Actolind® Gel Plus** forms a protective film layer between the wound surface and the dressing and prevents the adhesion of pathogenic microorganisms on the wound surface mechanically

- **Actolind® Gel Plus** is more suitable for wounds where high moisturisation effect needed or in presence of excessive wound exudate
- Thanks to its enhanced moisturising capacity, rheology and viscosity, **Actolind® Gel Plus** stays on the applied area, and provides continuous moisturisation and infection protection
- Minimises the growth of microorganisms at the interface between the wound and the dressing
- **Actolind® Solution Plus** facilitates removal of biofilms while **Actolind® Gel Plus** prevents the formation of biofilms

Indications:

- Infected or uninfected acute wounds
- Infected or uninfected chronic wounds
- Infected or uninfected thermal or chemical wounds (e.g. 1st and 2nd degree burns, chemical burns, etc.)
- Wounds caused by electrical current
- Radiation wounds
- Entry regions of urological catheters
- Maintenance of peristomal skin, fistulas and abscesses
- To create a barrier between the wound and the dressing, to prevent drying out and sticking.

Keep the wound safe!

Step 3

While keeping the wound safe against external effects with dressings specially designed for different wound types and sizes, you can ensure an effective healing process with exudate and moisture control technology.

Actolind® Hydrocolloid

Hydrocolloid adhesive, absorbent, waterproof wound dressing

Actolind® Hydrocolloid is a gelatin free hydrocolloid adhesive wound dressing laminated to a semipermeable, bacteria-proof and waterproof polyurethane film backing. The dressing forms gel upon absorbing wound exudates providing a moist wound environment that supports granulation and epithelialization.

Gel formation prevents the dressing from adhering to wounds and so the dressing can be removed without causing pain and without damaging the granulation of epithelial tissue.

Its thin form offers different usage options with its thin and flexible structure.

Usage Areas:

- Partial and full thickness dermal ulcers
- Pressure, leg and diabetic ulcers
- Burns (first and second degrees)
- Skin donor sites and skin grafts
- Superficial wounds/minor abrasions
- Protection of fragile skin or areas exposed to friction such as elbows, heels or the sacral area
- Ostomy wounds to protect the skin from stomal effluent
- Post-operative dressings for suture line protection
- Infants diaper rash

Actolind® Hydrocolloid Foam

Highly retentive hydrocolloid backed foam dressing

Actolind® Hydrocolloid Foam is absorbent polyurethane foam dressing with uniformly distributed highly absorbing powder.

The outermost layer is breathable, bacteria-proof, virus-proof and waterproof polyurethane film that protects the wound from external contamination.

Upon absorption of exudates, the foam matrix forms a soft gel that allows easy removal of the dressing.

Hydrocolloid layer forms gel upon absorbing wound exudates providing a moist wound environment that supports granulation and epithelialization. Gel formation prevents the dressing from adhering to wounds and so the dressing can be removed without causing pain and without damaging the granulation of epithelial tissue

Usage Areas:

- Chronic or acute wounds with moderate to heavy exudates
- Pressure ulcers, venous leg ulcers and diabetic foot ulcers
- Surgical wounds, donor sites, traumatic wounds, malignant wounds, graft sites
- First and second degree burns
- Suitable for use under compression bandaging

Wound Dressings

Actolind® Hydrocolloid Plus

Actolind® Foam Non Adhesive

Highly retentive foam dressing

1. Breathable polyurethane film
2. Polyurethane foam layer

Article No.

20.6330

Actolind® Foam Non Adhesive is absorbent polyurethane foam dressing with uniformly distributed highly absorbing powder.

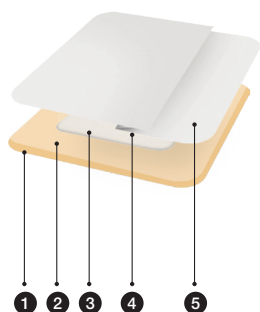

The outermost layer is breathable, bacteria-proof, virus-proof and waterproof polyurethane film that protects the wound from external contamination. Upon absorption of exudates, the foam matrix forms a soft gel that allows easy removal of the dressing.

Usage Areas:

- Chronic or acute wounds with moderate to heavy exudates
- Pressure ulcers, venous leg ulcers and diabetic foot ulcers
- Surgical wounds, donor sites, traumatic wounds, malignant wounds, graft sites
- First and second degree burns
- Suitable for use under compression bandaging

Actolind® Foam Adhesive

Highly retentive foam dressing with adhesive border

1. Backing layer
2. Adhesive border
3. Polyurethane foam island pad
4. Perforated polyurethane film
5. Release liner

Article No.

20.6340

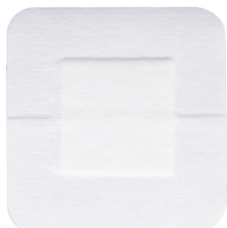

Actolind® Foam Adhesive is absorbent polyurethane foam dressing with uniformly distributed highly absorbing powder.

The outermost layer is breathable, bacteria-proof, virus-proof and waterproof polyurethane film that protects the wound from external contamination. Upon absorption of exudates, the foam matrix forms a soft gel that allows easy removal of the dressing.

Unlike the Non-Adhesive form, it can be used without a need for a secondary cover due to its adhesive borders.

Usage Areas:

- Chronic or acute wounds with moderate to heavy exudates
- Pressure ulcers, venous leg ulcers and diabetic foot ulcers
- Surgical wounds, donor sites, traumatic wounds, malignant wounds, graft sites
- First and second degree burns
- Suitable for use under compression bandaging

Article No.

20.6751

Actolind® Wound Pad-Adhesive

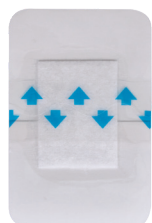

Highly retentive wound dressing

Actolind® Wound Pad-Adhesive sterile wound pad is a hypoallergenic sterile medical plaster made of porous, elastic nonwoven fabric.

Its porous structure permits skin moisture get through and allows the skin to breathe. Because it is water resistant, it protects the wound against moisture and wetting.

Its hypoallergenic adhesive does not irritate the skin. The pad does not stick to the wound, it is easy to remove.

It is permeable to x-rays, and it can be x-rayed without removing it.

Article No.

20.6761

Actolind® Wound Pad-Transparent Adhesive

Highly retentive wound dressing

Actolind® Wound Pad-Transparent Adhesive is a sterile medical plaster made of a thin transparent polyurethane film.

Its hypoallergenic adhesive does not irritate the skin. It allows oxygen and moisture vapor exchange. It is impervious to water and other liquids.

It prevents foreign substances such as dust and soil that may come from the external environment. Because of its transparent structure, it provides easy skin and wound observation.

It fits easily into the body lines and extend the period of use by moving with the body.

The pad does not stick to the wound, it is easy to remove. It is disposable and sterile.

Article No.

20.6230

Actolind® Sterile Gauze Compress

Highly retentive foam dressing

Actolind® Sterile Gauze Compress is used for cleaning wound and sterile wound closure. Thanks to its fast and high absorbency, it provides the necessary environment for wound healing.

It is used to absorb, cleanse and tampon blood and other secretions in surgical operations (excluding central nervous system, central heart and circulatory system) and dressings.

It can be used to clean the wounds after the operation, to cushion the blood on the tissue, to treat and care open wounds, to remove tissue fluids from the wound, to protect the injured area after treatment and dressing.

Article No.

20.6240

Actolind® Sterile Bandage

Highly retentive foam dressing

Actolind® Steril Bandage is used in situations requiring light pressure and to fix all kinds of dressing materials on the wound.

In fractures, it is used as an auxiliary material to fix the area and ensure its immobility, to protect the wound from external factors, to stop bleeding in the arms and legs and to prevent swelling.

Wound Dressings

APPLICATION TABLE

ACTO® branded wound dressings can be used on various wound types:

The healing process can be accelerated by cleaning, moisturizing and protecting the wound using **Actolind® w Solution / Solution Plus** and **Actolind® w Gel / Gel Plus** before the use of wound dressings.

										
Acute Wounds	Traumatic Wounds	Surgical Wounds	Pressure Ulcers	Diabetic Foot Ulcers	Venous Leg Ulcers	Ostomy Wounds	First and Second Degree Burns	Skin Donor Sites and Skin Grafts	Compression Bandaging	Fungal / Bacterial Infection

❖ It is used for secondary fixing and closing.

[illegible]

In cases where adequate normal nutrition cannot be provided, you can support the necessary metabolic needs and the formation of new tissue with food supplements.

300 ml	08.6711.300

Aclind® Anti-Hair Loss Shampoo / For Men

Hair shampoo for men

Genetic shedding, called AGA, is common in men and causes pattern hair loss.

Aclind® Anti-Hair Loss Shampoo was developed to reduce hair loss and protect the existing hair with its procapil enriched formula developed for the care of hair and scalp.

It does not contain any soap, SLS, or SLES and does not wear out hair.

With the internationally valid **V-Label** Certificate, it has proven that it is not of animal origin and has not been tested on animals. It was dermatologically tested and rated "excellent".

What does it smell like?

It envelops the hair with its woody and floral scent.

What's In It?

- Procapil
- Amino Acid Complex
- Hydrolysis Wheat Prote
- Sodium Pca
- Allantoin
- Vitamin B3
